Jakarta Utara, DKI Jakarta

Information Systems student combining **data analytics** (Python, SQL, ETL, BI) with **applied AI**, with hands-on experience building a **RAG chatbot with LLM routing**. Analytical and detail-oriented, with experience in testing, debugging, and teamwork on academic and industry projects.

EDUCATION

Telkom University **Jakarta, Indonesia**
Bachelor of Information Systems | GPA: 3.71/4.00 **Sep 23 - Present**

- Relevant coursework: Data Warehouse & Business Intelligence, Data Mining, Software Engineering Project, Deep Learning, Advanced UI Development.
- Member of Himpunan Mahasiswa Sistem Informasi (HIMA).

PROJECTS

Gymbro: Fitness Mobile App **Telkom University**
Team Project, Full-Stack Developer | Flutter, Express.js, MySQL **Apr 26 - Jun 26**

- Developed the workout catalogue and discovery module end to end in a 7-person Scrum team: MySQL schema and seed data, Express REST endpoints, and Flutter screens with muscle-group and difficulty filters.
- Built exercise detail pages with visual guides and text instructions, and introduced a shared theme palette for UI consistency.
- Collaborated through a Git feature-branch workflow with pull requests into a shared develop branch across 2 sprints over 11 weeks, contributing to a team total of 134 commits.

Sales Performance Analysis & Prediction **Telkom University**
Data Warehouse & Business Intelligence Course | MySQL, Pentaho, Python, Looker Studio **Sep 25 - Dec 25**

- Contributed to a star-schema data warehouse for European sales data built with Pentaho ETL, tracking 5 KPIs in a Looker Studio dashboard (team of 5).
- Performed K-Means clustering to segment 48 European countries by revenue, population, and GDP per capita, selecting k = 3 with the elbow method and silhouette score (CRISP-DM).
- Analyzed the segmentation KPI: 70.61% of revenue came from High and Medium Potential clusters, exceeding the 50% target.

EXPERIENCE

Indonesia Stock Exchange (IDX) **Jakarta, Indonesia**
Application Developer Intern **Jul 26 - Sep 26**

- Built a proof-of-concept enterprise chatbot (FastAPI, Next.js, PostgreSQL, ChromaDB) in a two-person team, based on a functional requirement from the company's system specification.
- Implemented the RAG pipeline: hybrid dense + BM25 retrieval, query rewriting from chat history, source citations with confidence scoring, and PDF export of conversations.
- Contributed to routing between an on-premise LLM (Ollama) and 4 commercial APIs (Groq, Gemini, Mistral, Cloudflare), so prompts containing sensitive data or PII stay on-premise.
- Ran a 63-scenario acceptance test and traced the failures to 6 root causes, fixing the bugs among them, including a retrieval ranking bug and a typo-tolerance gap in the sensitive-data routing gate.

SKILLS

- **Data:** Python, SQL (MySQL, PostgreSQL), Pentaho Data Integration (Kettle), Looker Studio, K-Means clustering, CRISP-DM
- **AI:** Retrieval-Augmented Generation (RAG), LLM integration, LangChain, ChromaDB, Ollama
- **Development:** FastAPI, Next.js, Express.js, Flutter, REST APIs, Docker, Git/GitHub
- **Languages:** Indonesian (native), English

CERTIFICATIONS

- Information Technology Specialist - Data Analytics, PKSTI Bandung, ID y88J-DkqG, 2026
- Mastering UI/UX: Digital Design Strategies to Improve User Experience and Business Conversions, Consultee and Co., No. 058/Pst-GIS149/III/2025, 2025
- Innovation in Marketing and Branding, Consultee and Co., No. 015/Pst-GIS144/II/2025, 2025
